VR1781

What are drugs?
 Drugs are substances that have an effect on the central nervous system. They have a potential for dependence and abuse. They are used for medical purposes, but they can also be used for recreational purposes.

Addiction
 Addiction is a chronic brain disease characterized by compulsive drug seeking and use, despite harmful consequences. It is caused by changes in the brain's chemistry and structure.

Dependence
 Dependence is a state of physical and psychological reliance on a substance. It is characterized by withdrawal symptoms when the substance is discontinued.

Signs of drug consumption
 Signs of drug consumption include changes in behavior, mood, and appearance. These signs can vary depending on the type of drug used.

Drug addiction
 Drug addiction is a chronic brain disease characterized by compulsive drug seeking and use, despite harmful consequences. It is caused by changes in the brain's chemistry and structure.

Possible personality changes caused by chronic drug consumption
 Chronic drug consumption can lead to personality changes, including increased risk-taking, social withdrawal, and loss of interest in activities.

Additional risks of drug consumption
 Additional risks of drug consumption include overdose, infection, and legal consequences. These risks can be minimized by using drugs safely and responsibly.

Withdrawals/SD
 Withdrawals (SD) are symptoms that occur when a person stops using a drug after prolonged use. These symptoms can be severe and long-lasting.

Possible symptoms due to drug withdrawal
 Possible symptoms due to drug withdrawal include anxiety, depression, and physical symptoms such as sweating and tremors. These symptoms can be managed with medical support.
